

Boiler/ Mechanical Rooms

A building's mechanical system is the heartbeat of the heating, ventilation, and air conditioning systems. These areas include utility plants, boiler and chiller rooms, mechanical or electrical rooms, and fuel rooms. Many states are adopting laws that require the monitoring of these potentially hazardous environments.

[Gas Boiler Guide](#)

A growing trend for gas detection in boiler rooms has prompted many states to adopt legislation.

The Gas Boiler Guide explains what gases should be detected in gas boiler rooms, why it is essential to detect these harmful gases early, and examples of system layouts for optimal safety.

Gas Storage Guide

"Lunch & Learns provide a time where we as a manufacturer can get a group of potential customers/engineers into a room and have more personal training. Bringing a lunch to an existing customer is an easy way to show appreciation for the partnership. In many ways, having lunches provided attracts some individuals who wouldn't be able to attend due to scheduling and/or initial interest. There are many reasons these can be successful but educating and showing appreciation will always stand out."

- Branden Dewing, National Sales Manager

"It is not very often that our customers get the time to think about their gas detection needs. A lunch and learn will usually get them focused on their needs and can find solutions to issues they might have been dealing with for quite some time."

LUNCH AND LEARNS

MACURCO GAS DETECTION

"Lunch and Learns are a good tool for training because it is more informal and puts everyone at ease. This will allow for more open discussions about product pros and cons and how we compare with other products in the market. It also allows for discussion about experiences, both from a manufacturer's perspective and applications they have been running into in the field. These discussions always seem to turn into new opportunities for our products to help customers."

- Andy Turner, East Coast Regional Sales Manager

MACURCO GAS DETECTION

FEEDING SOUTH DAKOTA

Q3 VOLUNTEER EVENT

Macurco Gas Detection volunteered at Feeding South Dakota for our Q3 volunteer event. We had a great time giving back to our community! Feeding South Dakota's mission is to end hunger in South Dakota.
